PaL Lab News

The Competence Matrix

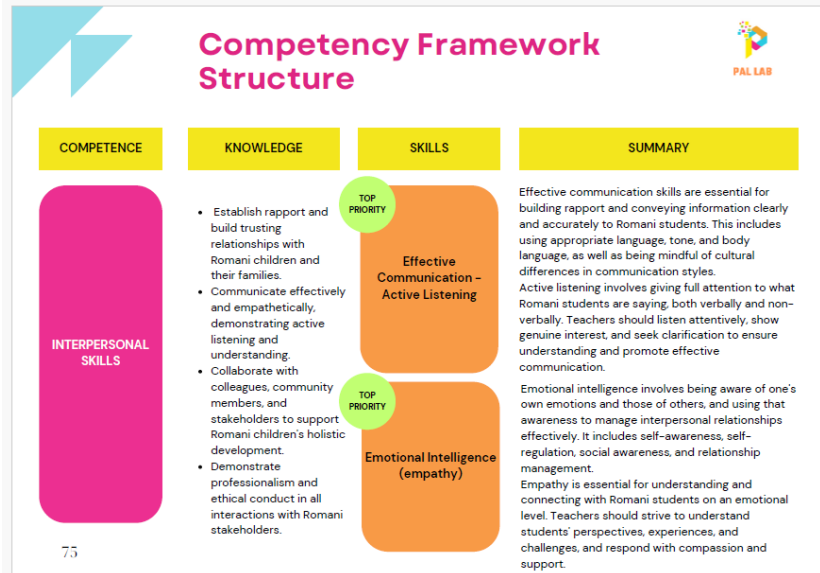

The PAL LAB Competence Matrix aims at the development of teachers' skills and competences in order to fight against and eliminate early school leaving by Romani students.

Partners worked together to analyse and process their findings from all previous activities and draw results on the necessary skills and competences for teachers that work with Romani children.

Romani children have unique learning needs and preferences and educators must be provided with strategies to adapt their teaching methods in order to better meet the Romani students' needs.

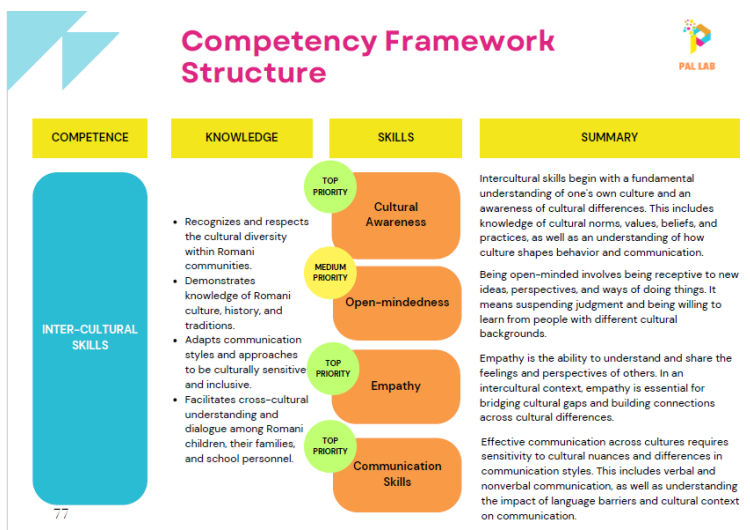

This may include incorporating culturally relevant materials and utilizing interactive and experiential learning approaches!

The Competency Framework represents a set of guidelines and standards that outline the knowledge, skills, attitudes and behaviours required for effective teaching and engagement with Romani students. This framework is designed to help teachers understand the specific needs, backgrounds, and experiences of Romani children and to equip them with the tools necessary to support their academic, social, and emotional development in order to eventually prevent early school leaving. The skills are categorized into four main Competencies including Interpersonal Skills, Inter-cultural Skills, Digital Skills and Pedagogy Skills. Moreover, the skills are labeled as top priority, medium and low priority, depending on their importance.

Setting out the necessary skills for teachers, gives the partners the essential tools for the successful elaboration of the teachers' curriculum entitled "Pedagogy Toolbox for teachers and mediators".

The curriculum aims to set a basis for comparable and high-quality education for teachers of Romani in order to initiate primarily a qualitative (as well as quantitative) change in Romani teaching and, inter alia, to improve the quality of education and the educational situation of Romani children by raising respect for the teachers and lessons.

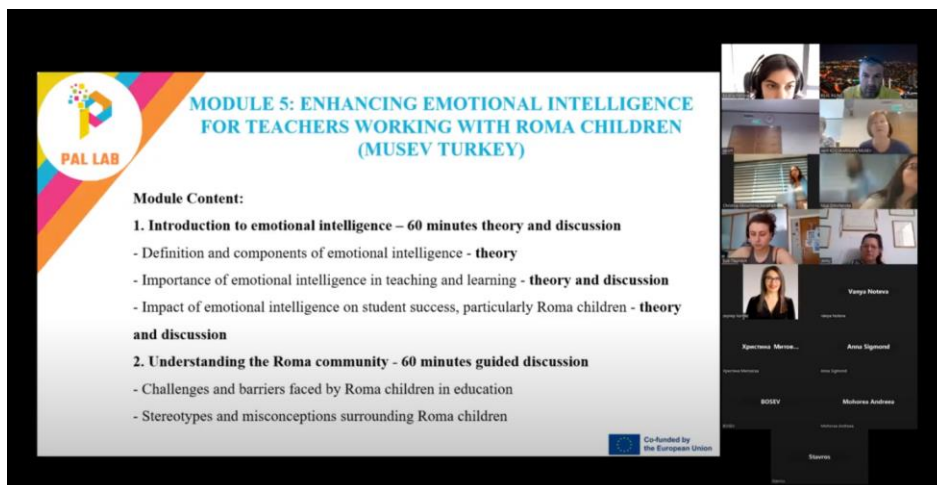

Learning Teaching Training Activity in Ankara

We're excited to announce that an online Learning Teaching Training Activity (LTTA) of trainers was successfully conducted in Ankara.

The purpose of this training was to engage participants in shaping the five modules of the material currently under development, aimed at receiving feedback and paving the way for the training and pilot testing phase in Sofia, Bulgaria. This initiative marks a

significant step forward in our efforts to create comprehensive and effective educational resources, and we look forward to the next stages of development and implementation.

2nd Transnational project meeting

Exciting Updates from Ankara, Turkey!

With great pleasure, we bring you the latest highlights from the vibrant atmosphere of our second partner meeting in Ankara, Turkey. The energy was palpable as we convened to chart the course for our collective journey forward.

It was a gathering filled with fruitful discussions, paving the way for our next steps and organising the upcoming training session in the wisdom of Bulgaria.

During our time together, we had the pleasure of delving into the upcoming agenda, setting the stage for collaborative efforts and knowledge exchange. One of the key highlights was the vibrant exchange of ideas on the first day, where educators from all partner countries engaged in

enriching discussions. These discussions were centred around the guide we've been diligently crafting to enhance the skills of educators.

The synergy among participants was palpable as we collectively worked towards our shared goals of advancing education and fostering a culture of continuous learning. We're excited about the progress made and look forward to the next phase of our journey together.

Stay tuned for more updates as we continue to make strides in the Pal Lab program!
